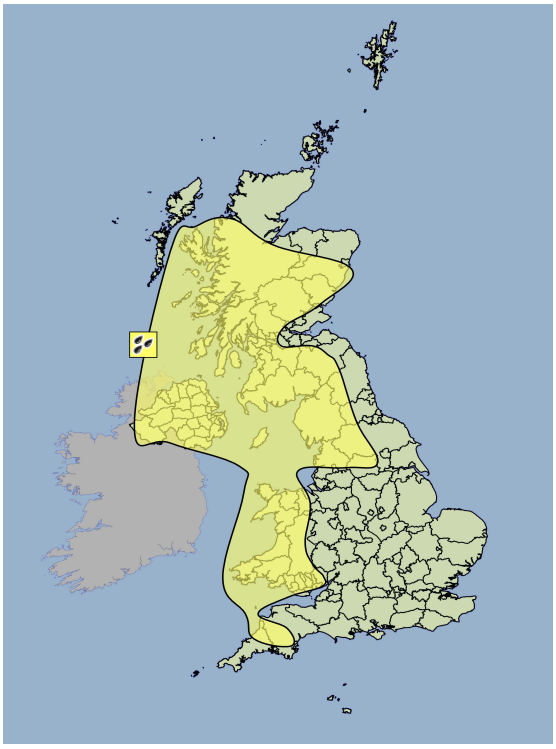
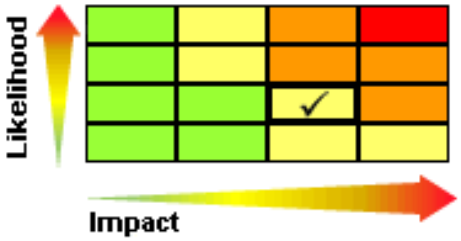
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A cold front will move east across western parts of the UK during Tuesday night and Wednesday, with an associated strong, moist southwesterly airflow. Rainfall accumulations through this period are expected to be widely 20-40 mm, with 60 mm or more over some higher ground. The very wettest areas are likely to include parts of southern and central Scotland along with Cumbria, with over 100 mm possible in places; separate Amber warnings cover these higher risk areas.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **19:00 on Tue, 29th Dec 2015** until **15:00 on Wed, 30th Dec 2015**

A band of rain, often heavy, will affect Northern Ireland during Tuesday evening, before spreading east across Scotland, Wales and northern and western parts of England during Tuesday night and Wednesday. Rain will be heaviest and most persistent over higher ground.

Please be aware of the potential for moderate levels of disruption in places from both surface water and river flooding. Please also refer to the associated Amber Warnings.

The warning has been updated to bring forward the start time, chiefly for Northern Ireland, and also the end time, as well as to extend the area into southwest England, although impacts here are likely to be less than further north. Further updates will be issued as necessary.
